

Winfried Rijssenbeek
Director Of Business Development | Drone4Agro

Winfried Rijssenbeek is an agricultural engineer, graduated from the WUR in Wageningen. In his younger years he was fascinated by model aeroplanes, and particularly enthusiastic about developing his own experimental designs. After a career at the FAO in social forestry, and soil conservation in various developing countries, he worked as a consultant, particularly in the field of sustainable energy for developing countries (among others for the Ministry of Development Cooperation, the EU and the World Bank). For a number of years now, he has been busy developing drone innovations. With his company Drone4Agro he developed and produced large capacity spraying drones for agriculture.
